

**Amendments to the Specification:**

Please replace paragraph [0033] on page 9, with the following paragraph:

[0033] Figure 8 illustrates the increased construction flexibility offered by this particular design. This design permits panel units to be constructed in shorter lengths. Accordingly, rather than employ a single panel unit having a length L as shown in Figure 8, four panel units ~~200, 202, 204, and 206~~ and 208, may all be snap-fit together to form length L. Having shorter panel lengths facilitates the manufacturer of these panel units in a press.
